

Maintenance as a tool ...

Written by Administrator

... to increase the electric power availability, reduce running costs and prevent damage to people & property

Leonardo Energy launches its **case study series** with this first one about maintenance as a tool to increase the electric power availability, reduce running costs and prevent damage to people & property by [Matteo Granziero](#) .

A lack of preventive maintenance on electrical systems can cause poor quality and wasted power or even danger for people and property. Scheduling annual inspections by experienced personnel is the solution to maintain high levels of electric power and safety for the enterprise.
